

Why Agile?

The Economics, Psychology, and Science of Agile's Success

@matthewrenze

#codemash

Purpose

- Explain why Agile practices are so successful
- Insights from:
 - Economics
 - Psychology
 - Science
- Top 7 most important ideas
- Ideas that are not typically covered

Overview

1. The World after Midnight
2. Inverted Constraints
3. Prioritizing Value
4. Embracing Change
5. Self-Organization
6. Effective Communication
7. Feedback

About Me

- Independent software consultant
- Education
 - B.S. in Computer Science
 - B.A. in Philosophy
- Community
 - Pluralsight Author
 - ASPInsider
 - Public Speaker
 - Open-Source Software

UNIVERSITY

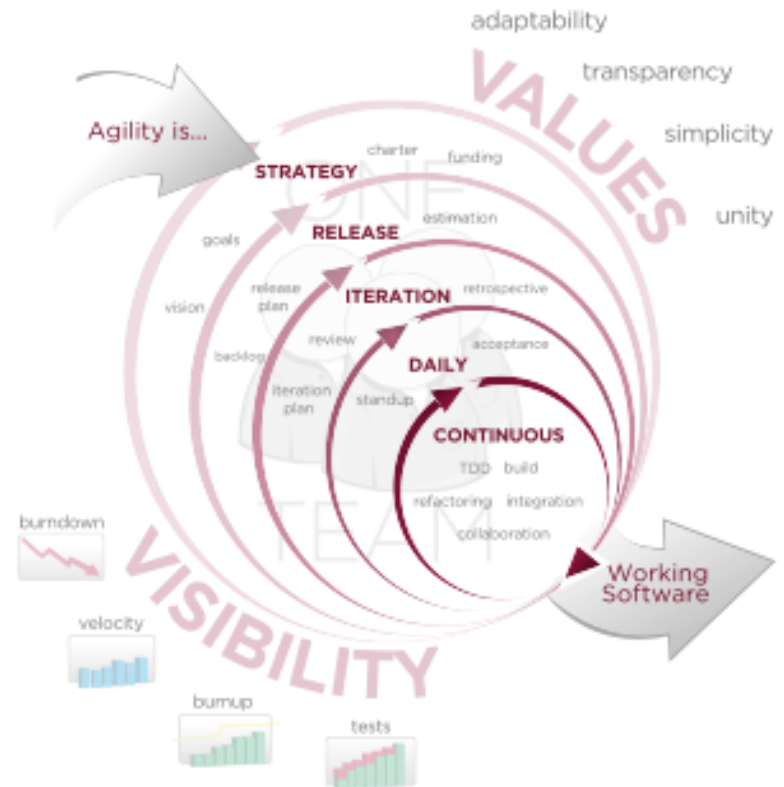

A Brief Review of Agile

What is Agile?

Agile Manifesto

- 4 value propositions
- 12 principles

Common practices

Source: Wikipedia

What is Agile?

Agile is *not*:

- A software development methodology itself
- A silver bullet for all your software woes

Source: <http://www.best-story.net/userfiles/silver-bullets.jpg>

Agile Values

- Individuals and interactions
 - over processes and tools
- Working software
 - over comprehensive documentation
- Customer collaboration
 - over contract negotiation
- Responding to change
 - over following a plan

Source: <http://agilemanifesto.org/>

12 Principles of Agile

1. Continuous delivery of value
2. Embrace changing requirements
3. Frequent deployment
4. Customer collaboration
5. Motivated individuals
6. Face-to-face conversation

12 Principles of Agile

- 7. Working software as measure of progress
- 8. Sustainable development
- 9. Technical excellence
- 10. Simplicity
- 11. Self-organization
- 12. Continuous improvement

Agile Methodologies

- Scrum
- XP
- Kanban
- Lean
- And many more...

Source: <http://parkertoddluesch.files.wordpress.com/2011/09/umbrella.jpg>

Is Agile More Successful?

Waterfall

Agile

Agile = Good
Waterfall = Bad

VS

1. The World after Midnight

Source: www.ted.com

The World After Midnight

*About fifteen years ago all the 'Rules' about how to run a business, organization, or government successfully, were changed or deleted and a completely new set of 'Rules' has been in operation ever since, which means that **we keep acting rationally in response to a world we recognize and understand... but which no longer exists!***

- Eddie Obeng

The World After Midnight

The World after Midnight

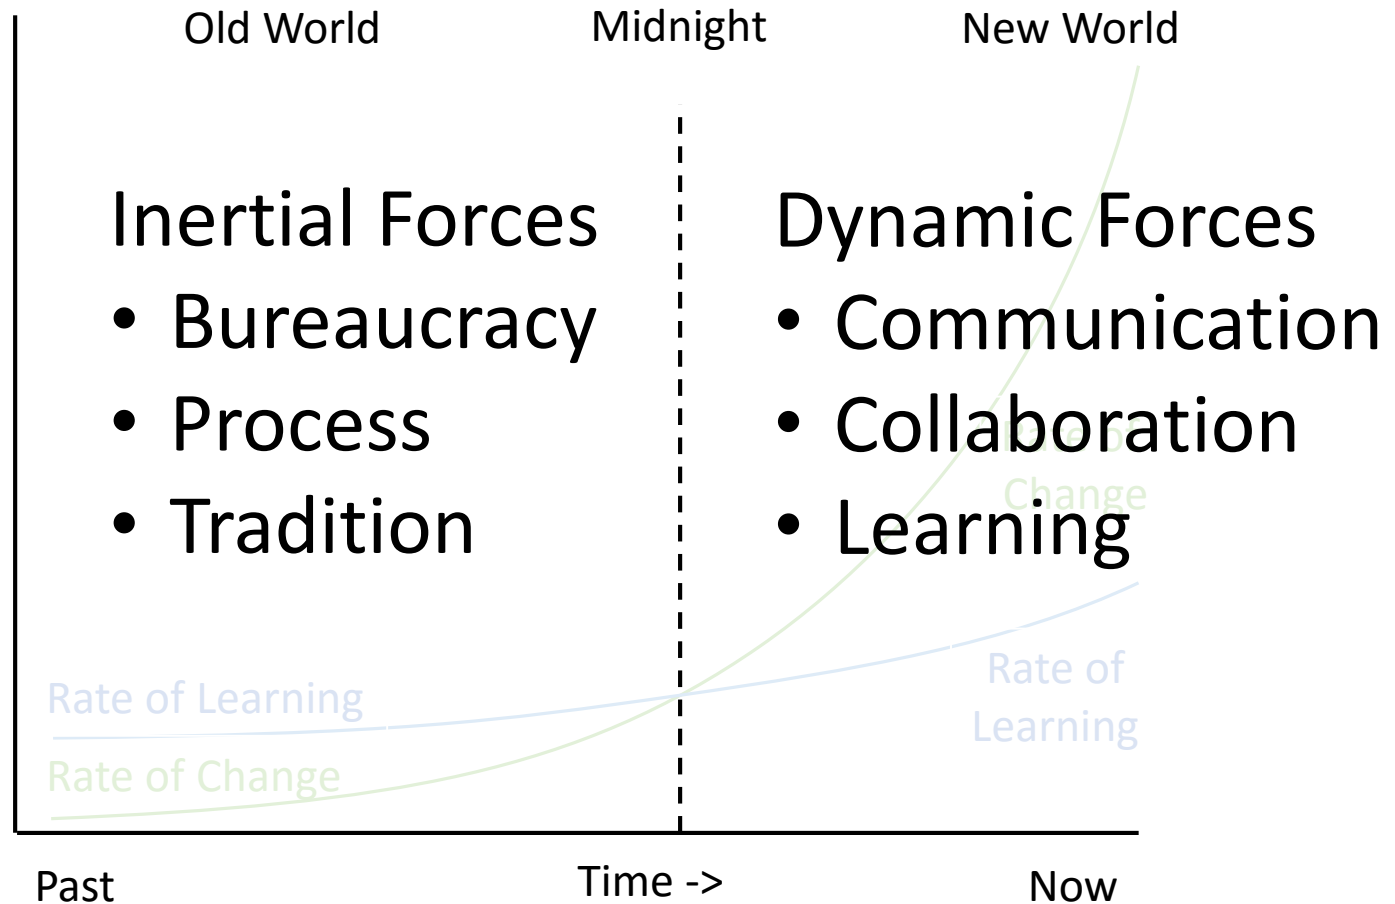

The World after Midnight

The World after Midnight

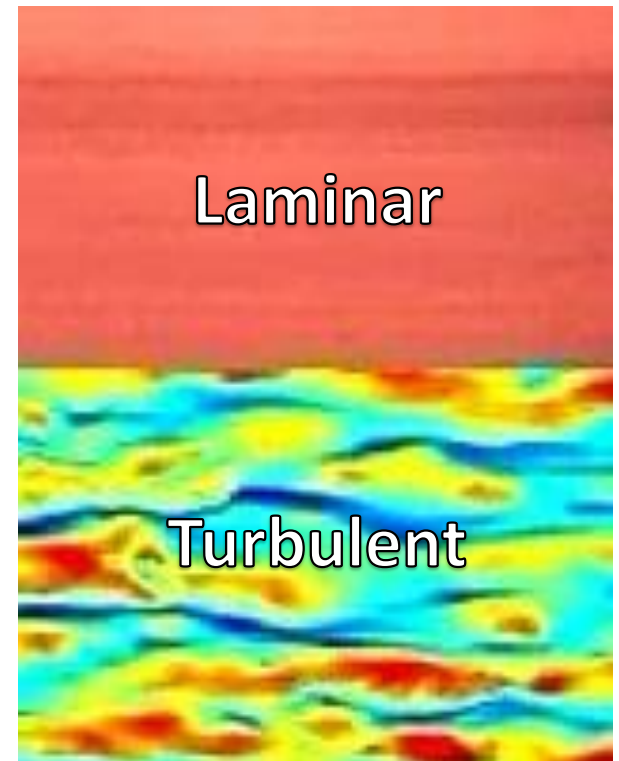

The World after Midnight

Laminar Flow vs. Turbulent Flow

Laminar Flow vs. Turbulent Flow

Influence Index

Why is this important?

Problem

- World has changed
- Markets change rapidly
- Requirements change rapidly
- High degree of uncertainty

Solution

- Adapt to new physics
- Faster time-to-market
- Better response to change
- Continuous and rapid feedback

Agile is very well suited to operate
in the physics of this new world!

2. Inverted Constraints

Four Levers of Software Development

- Levers
 - Scope
 - Resources
 - Schedule
 - Quality
- Goals
 - Working software
 - Max value
 - Min cost

Source: http://farm6.staticflickr.com/5300/5521479079_36815225e4_z.jpg

Constraints

- Restriction on a degree of freedom
- Prevent the system from achieving its goal
- Examples
 - Time
 - Money
 - Talent

Source: <http://www.myspaceantics.com/image-myspace-graphic/funny-pictures/outfielder-wall-collision.jpg.html>

Constrained Optimization

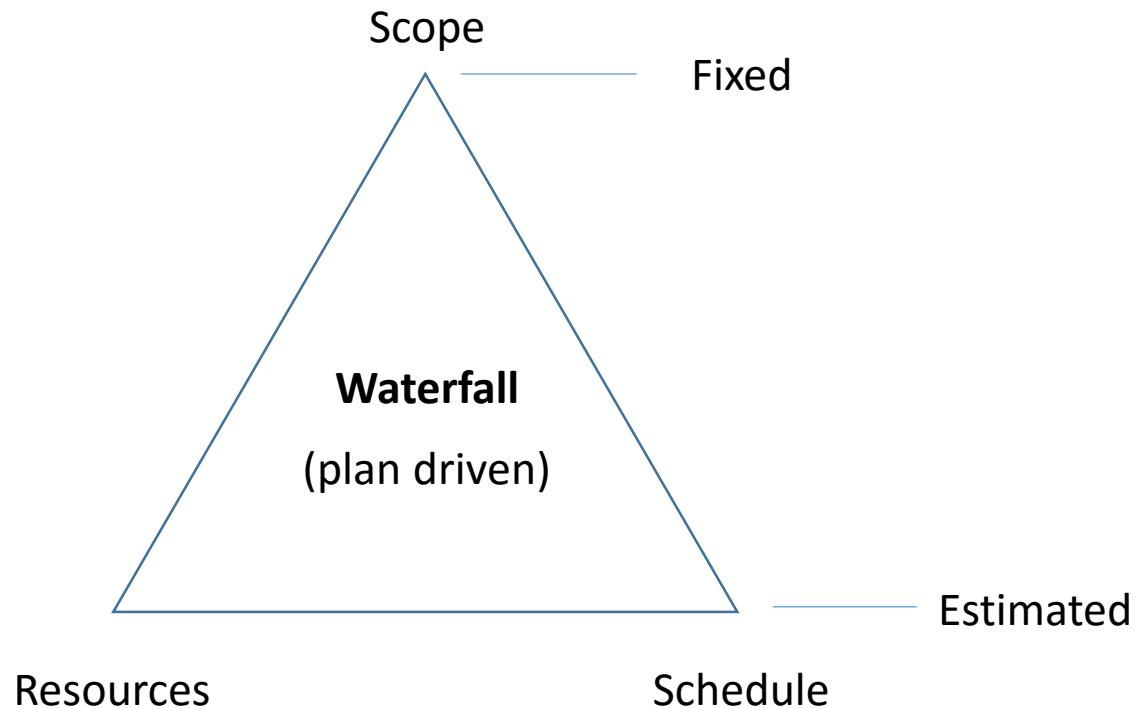

Constrained Optimization

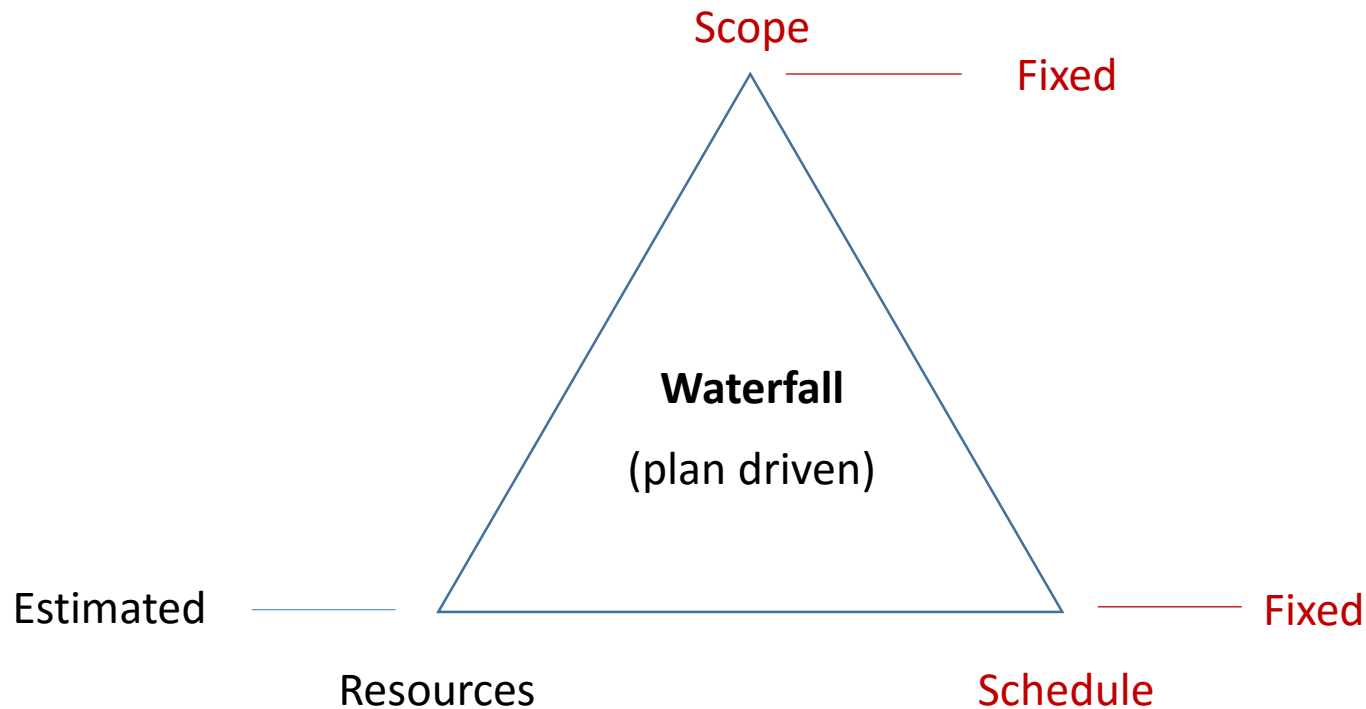

Too much to math!

Waterfall Constraints

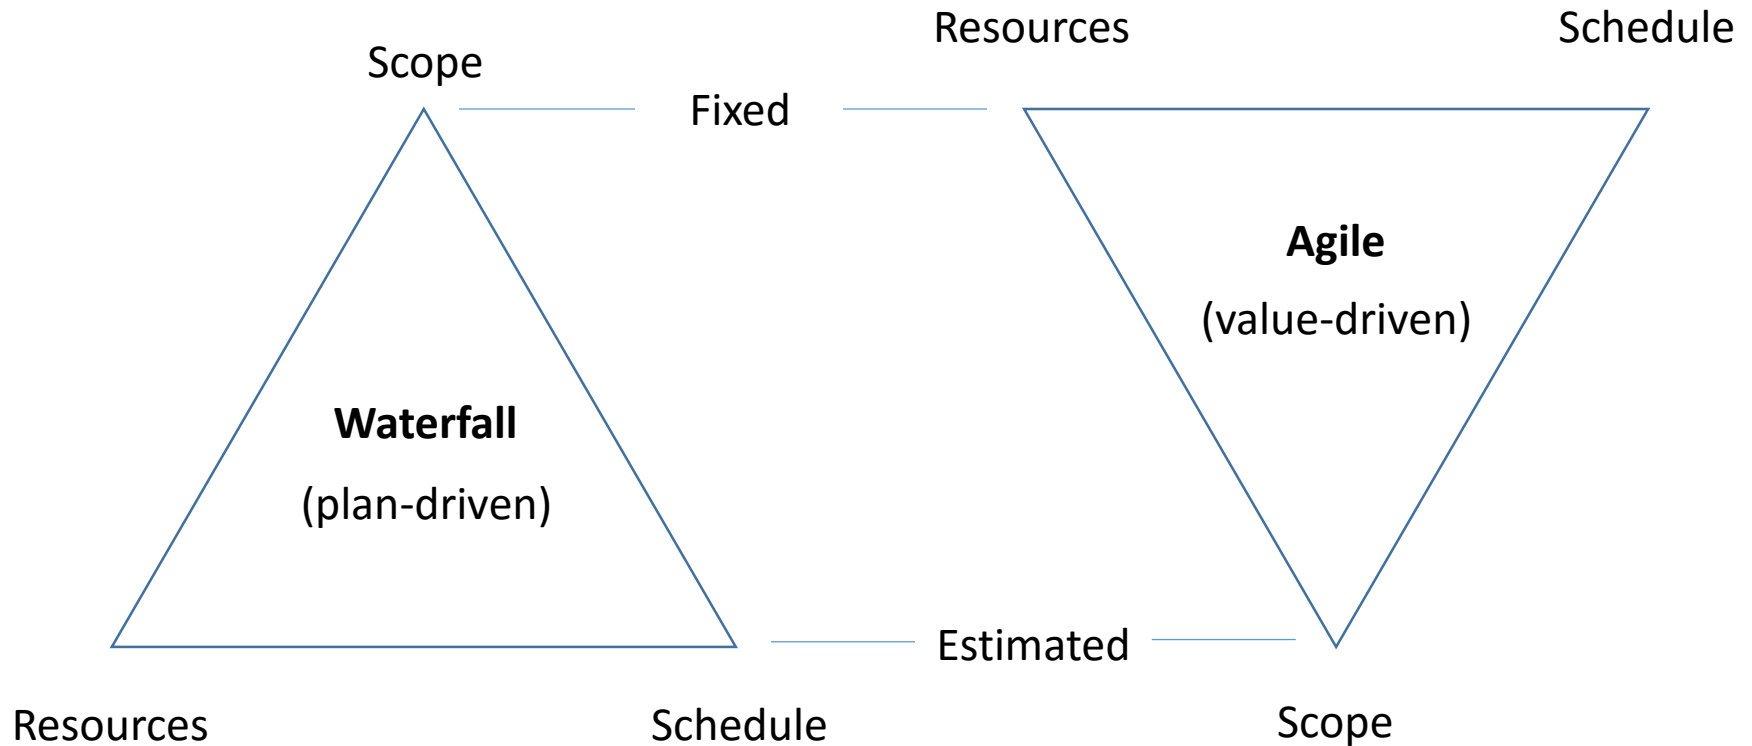

Waterfall Constraints

Waterfall Constraints

Agile Constraints

Agile Constraints

- Fixed team size
- Fixed releases
- Estimated features
- Team controls quality

Why is this important?

Problem

- Mythical man-month
- Slipping release dates
- Scope creep
- Technical debt

Solution

- Limit team size
- Fix schedule
- Estimate scope
- Protect quality

Agile is more flexible

3. Prioritizing Value

Quick Lesson in Economics

1. Return on Investment
2. Pareto Principle
3. Opportunity Cost

Source: <http://myhomeworkhelp.com/economics-homework-help/>

Return on Investment

- $ROI = \frac{Value - Cost}{Cost}$
- High ROI => lots of value
- Low ROI => some value
- Neg. ROI => lost value

Return on Investment

- Each feature has ROI
 - Cost to develop
 - Value to business
- Project ROI is sum of all feature ROIs
- Goal is to maximize ROI

Pareto Principle

- 80/20 rule
- 80% of effects
- 20% of causes
- Power law function
- Diminishing marginal returns

Pareto Principle of Software Feature Usage

- Features
 - 20% of features
 - 80% of value
- Traditional software is
 - 20% high-value features
 - 80% low-value features

Source: Standish Group

Opportunity Cost

Source: <http://www.ethicurean.com/2009/03/03/free-lunch-program-in-new-england/>

Opportunity Cost

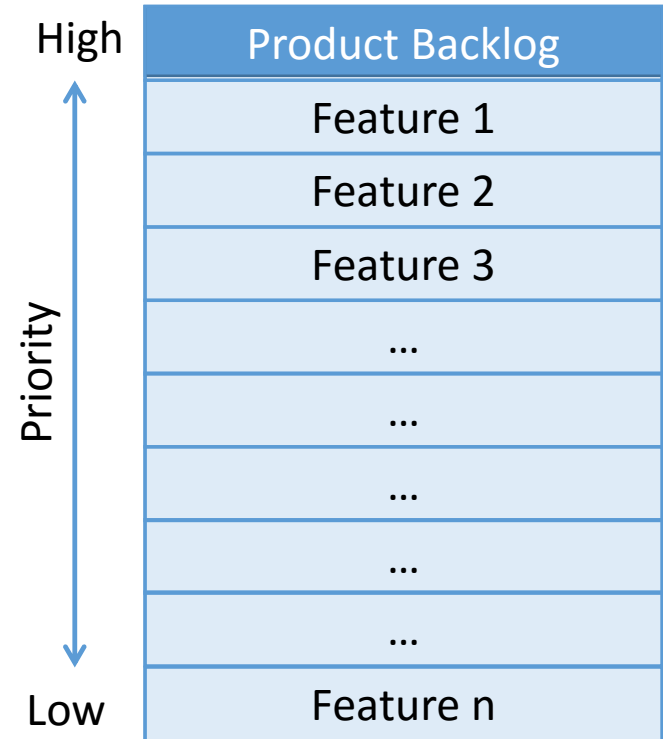

- Cost of foregone alternative options
- True cost = explicit cost + implicit cost
- Must be included in cost-benefit analysis

Source: <http://www.stus.com/>

Prioritizing Features by Business Value

- Product backlog
- List of features
- Ordered by business value
- Highest priority on top
- Create and deliver features in order

Why is this important?

Problem

- Need to maximize ROI
- Need to reduce low-value features (80/20)
- Need to consider opportunity cost

Solution

- Prioritize features according to ROI
- Deliver highest-value features first
- Prioritize features relative to one another

Agile Produces More Value

4. Embracing Change

Waterfall Assumes that Things Will Go According to a Plan

Plan:

Start —————→ **Finish**

Waterfall assumes that everything will go according to plan

Plan:

Start —————→ **Finish**

Actual:

Start  **Finish**

Waterfall Assumptions

- Users actually know what they want
- Markets will not change during development
- There is nothing new or unknown
- Technology is stable and mature
- All of the pieces will fit together in the end

Waterfall Reality

- Requirements are not stable
- Requirements are just assumptions

Cost of Fixing Defects in Waterfall

Original Source: Barry Boehm, "Equity Keynote Address" March 19, 2007

Finding Defects in Waterfall

Finding Defects in Agile

Cost of Change in Agile

Source: <http://www.agilemodeling.com/essays/costOfChange.htm>

Why is this important?

Problem

- Requirements change
- Finding and fixing defects late is costly
- Late changes in software are costly

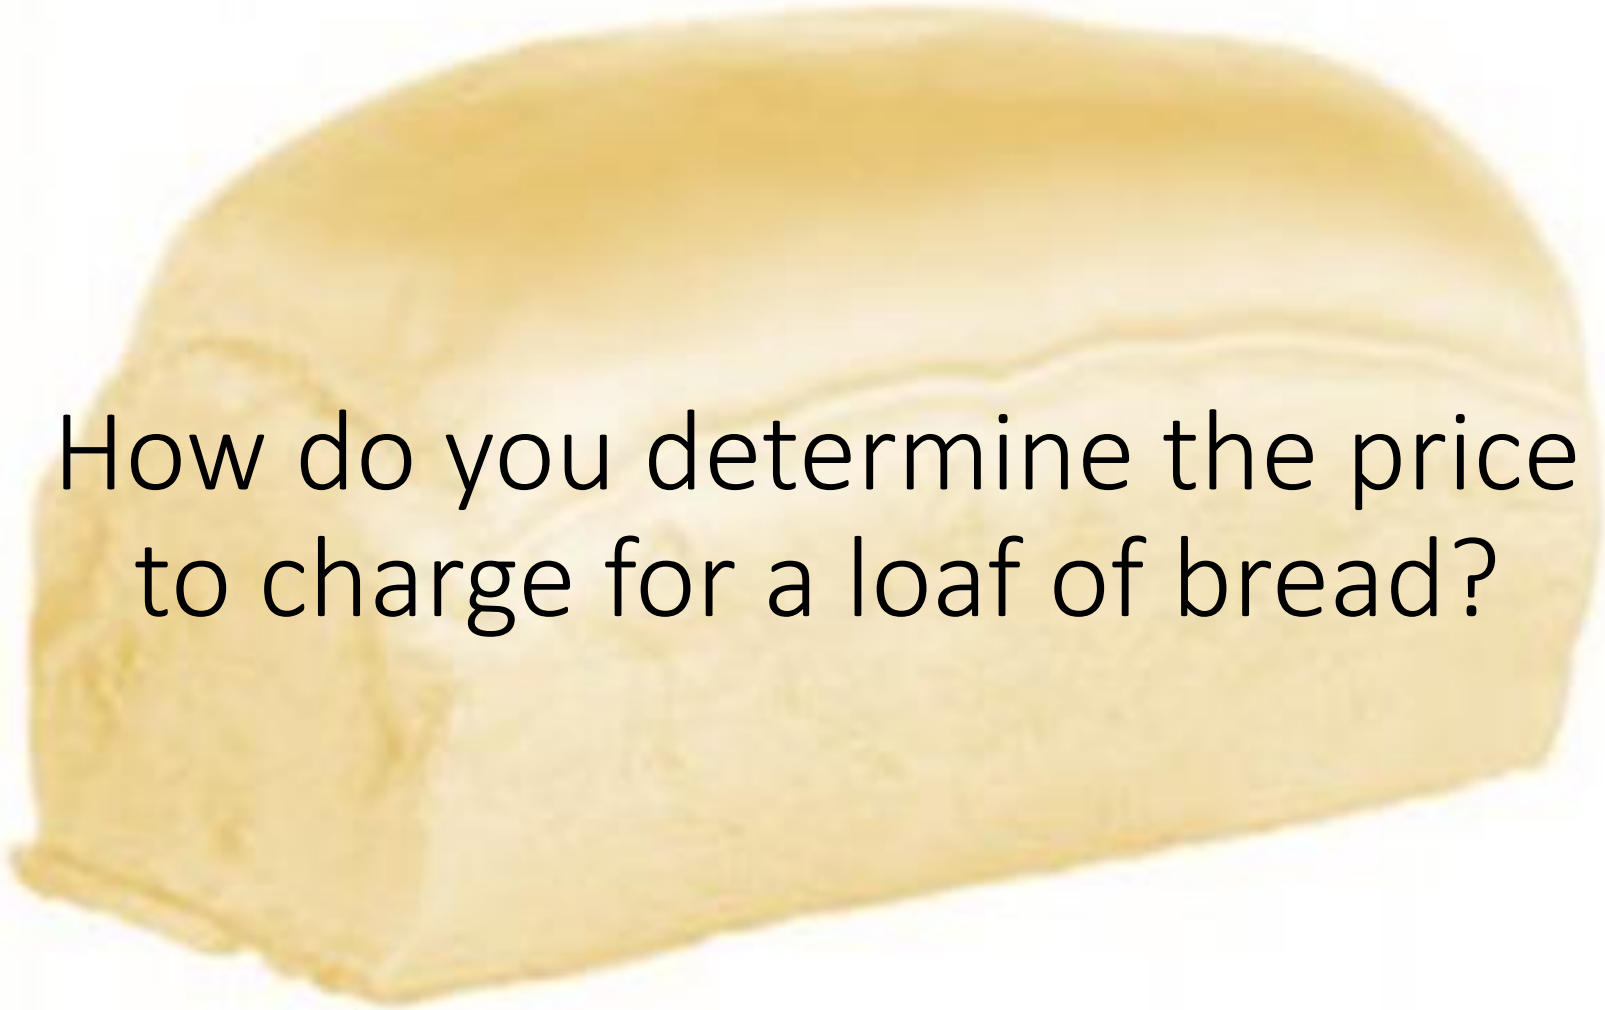

Solution

- Embrace change
- Find and fix defects early
- Build flexibility into your code and process

Agile is More Adaptable

5. Self-Organization

A photograph of a single loaf of bread, likely a French baguette, with a golden-brown crust and a slightly irregular shape. The bread is positioned horizontally and serves as the background for the text.

How do you determine the price
to charge for a loaf of bread?

Market Economy

- Market makes decisions
 - Individuals
 - Interactions
- Produces & Consumers
 - Supply
 - Demand
- Millions of decisions

Source: Britannica

Market Economy

- Goal: Maximize Social Welfare
- Competitive Market Equilibrium
- Extremely efficient
- “Chaotic success”

Source: https://content.dodea.edu/VS/HS/DVHS_Courses/Economics/syllabus.html

Complex Adaptive Systems

- System
 - collection of interconnected things
- Complex
 - dynamic network of interactions
- Adaptive
 - changes in response to environment
 - to increase survivability

Inversion of Control

- Top-down
 - Command and Control
 - Bureaucracy
- vs.
- Bottom-up
 - Self-organization
 - Adhocracy

Source: <http://funnyasduck.net/post/10458>

Wisdom of the Crowd

- Take collective guesses of the crowd
- Aggregated answer is often better than expert
- Works well for some types of knowledge
- Not all crowds are wise!

Why is this important?

Problem

- Command and control is slow and inefficient
- Poor information flow in top-down structures
- Ineffective decisions

Solution

- Self-organizing teams
- Invert control structure to bottom-up
- Wisdom of the Crowds

Self-organizing Agile teams
are more efficient

6. Effective Communication

Cost of Poor Communication

- Cost is enormous
- Hard to quantify
- Hidden cost
- Expense is real

Source: <http://www.cathy.willman.com/2012/06/what-boys-need.html>

Cost of Poor Communication

- 17.5 hrs / person / week
- Top 5 issues identified:
 1. Waiting for information
 2. Unwanted communication
 3. Inefficient coordination among team members
 4. Barriers to collaboration
 5. Customer complaints

Total estimated annual cost of poor communication per enterprise knowledge worker: **\$50,562**

Source: <http://thoughtleadership.sismarketresearch.com/industrial-b2b-journal/2009/3/10/smb-communications-pain-study-white-paper-uncovering-the-hid.html>

Communication Structures

- Modeled as a complete graph
 - Nodes = people
 - Edges = channels
- Edges increase by $O(n^2)$ for each node
- Becomes extremely inefficient very fast

Source: Wikipedia

Effectiveness of Communication

Copyright 2002-2005 Scott W. Ambler
Original Diagram Copyright 2002 Alistair Cockburn

Effectiveness of Communication

Signal-to-Noise Ratio

- $SNR = P(\text{signal}) / P(\text{noise})$
- Signal = message
- Noise = everything else
- Goal is to maximize signal-to-noise ratio

Source: <http://uber.la/2012/05/signal-to-noise/>

Visibility

- Waterfall tends to hide many problems
- High visibility at start
- Low visibility at middle
- High visibility at end

Original source: <http://www.versionone.com/Agile101/Agile-Software-Development-Benefits/>

Visibility

- Agile provides visibility:
 - Information radiators
 - Regular inspection and adaptation
 - Frequent delivery of working software
- Agile is on the surface with project visibility
- Problems have no where to hide

Original source: <http://www.versionone.com/Agile101/Agile-Software-Development-Benefits/>

Why is this important?

Problem

- Communication overload in large teams
- High cost of poor communication
- Lack of transparency

Solution

- Small teams
- Maximize signal-to-noise ratio
- Increase visibility

Agile teams communicate
more effectively

7. Feedback

Source: <http://www.letterstobuffoons.com/wp-content/uploads/2012/09/ShowerHandle.jpg>

Cone of Uncertainty

Original Source: Barry Boehm, Software Engineering Economics (1981)

Feedback and Learning

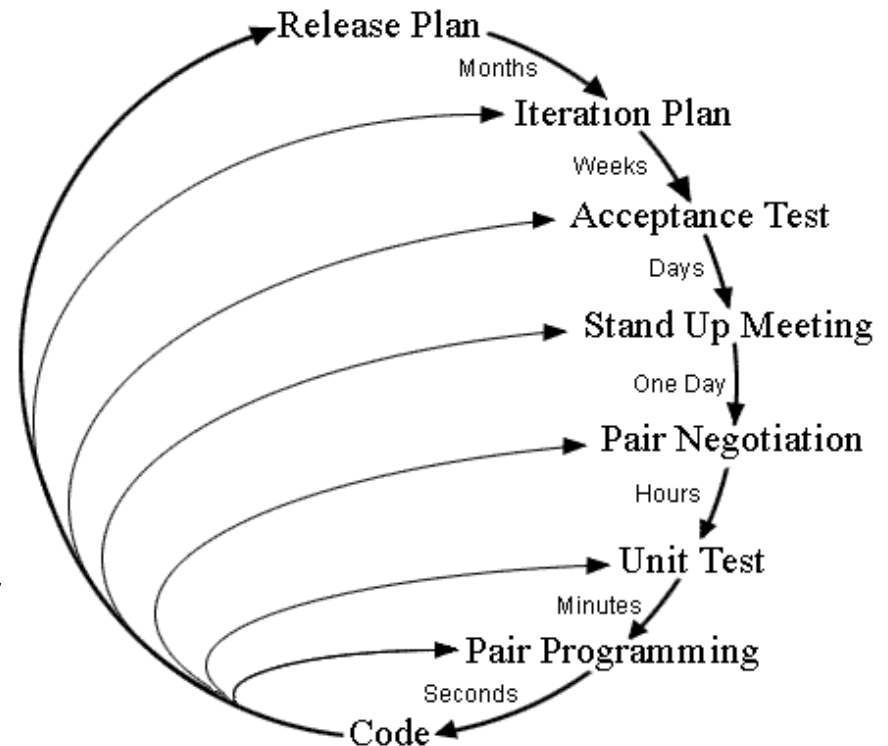

- We reduce uncertainty by learning
- Feedback is necessary for learning
- Continuous and rapid feedback allows us to learn more effectively

Source: <http://www.icanhascheezburger.com>

Agile Feedback

- Continuous and rapid feedback
- Multiple timescales
- Powerful for:
 - Learning
 - Reducing risk
 - Eliminating Uncertainty

Source: <http://www.agile-process.org/communicate.html>

Smart Failure

- Short and frequent experiments
 - Lots of small failures
 - Lots of small successes
- Low cost and high value
- Old world vs. new world
- Requires mindset change
 - It's ok to fail small
 - It's ok to fail smart
 - However...

It's Not OK to Fail BIG!

Source: <http://t4toby.files.wordpress.com/2008/07/epicfail1.jpg/>

Know When to Pivot

- Pivot = change direction
- When our assumptions are incorrect we pivot
- Pivot early, not late
- Minimize cost to pivot

Source: <http://thesalespivot.com/wp-content/uploads/2011/07/left-turn-sign.jpg>

Why is this important?

Problem

- Cone of uncertainty
- Epic failure
- Difficulty changing course once invested

Solution

- Feedback
- Embrace smart failure
- Minimize cost to learn and pivot if necessary

Agile Teams Use Feedback to Reduce Risk

Know When to Stop

Know When to Stop

- Everything else:
 - The Cost of Complexity
 - Eliminating Waste
 - Inventory Hides Problems
 - Metrics Have Consequences
 - Embracing Human Factors
 - Information Gain / Entropy
 - Embedded Documentation
 - Kanban and Queuing Theory
 - TDD, Dopamine, and Crack
 - Sustainable Development
 - Agile is an Emergent Property
 - and much more...

Source: <http://www.rounds.com/blog/wp-content/uploads/2010/11/stop-hammertime.png>

Conclusion

Why is Agile so Successful?

1. It is well adapted to the world after midnight.
2. It inverts its constraints to be more flexible.
3. It maximizes ROI by prioritizing features by value.
4. It is more adaptable by embracing change
5. It utilizes the efficiencies of self-organization.
6. It produces more effective communication.
7. It reduces risk by continuous and rapid feedback.

Feedback

- Feedback is very important to me!
- One thing you liked?
- One thing I could improve?
