Why Agile?

The Economics, Psychology, and Science of Agile's Success

Matthew Renze @matthewrenze

Twin Cities Code Camp 2014

Purpose

- Explain why Agile practices are so successful
- Insights from:
 - Economics
 - Psychology
 - Science
- Top 7 most important ideas
- Ideas that are not typically covered

Overview

- 1. The World after Midnight
- 2. Inverted Constraints
- 3. Prioritizing Value
- 4. Embracing Change
- 5. Self-Organization
- 6. Efficient Communication
- 7. Feedback

A Brief Review of Agile

What is Agile?

- Started with the Agile Manifesto
 - 4 value propositions
 - 12 principles
- Common set of practices across several methodologies

Source: Wikipedia

What is Agile?

Agile is *not*:

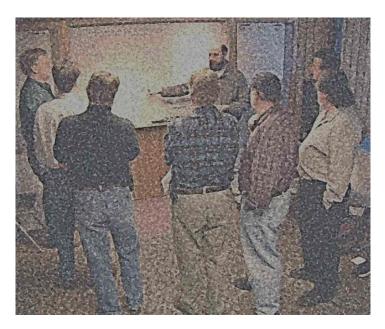

- A software development methodology itself
- A silver bullet for all your software woes

Source: http://www.best-story.net/userfiles/silver-bullets.jpg

Agile Values

- Individuals and interactions
 - over processes and tools
- Working software
 - over comprehensive documentation
- Customer collaboration
 - over contract negotiation
- Responding to change
 - over following a plan

Source: http://agilemanifesto.org/

12 Principles of Agile

- 1. Continuous delivery of value
- 2. Embrace changing requirements
- 3. Frequent deployment
- 4. Customer collaboration
- 5. Motivated individuals
- 6. Face-to-face conversation

12 Principles of Agile

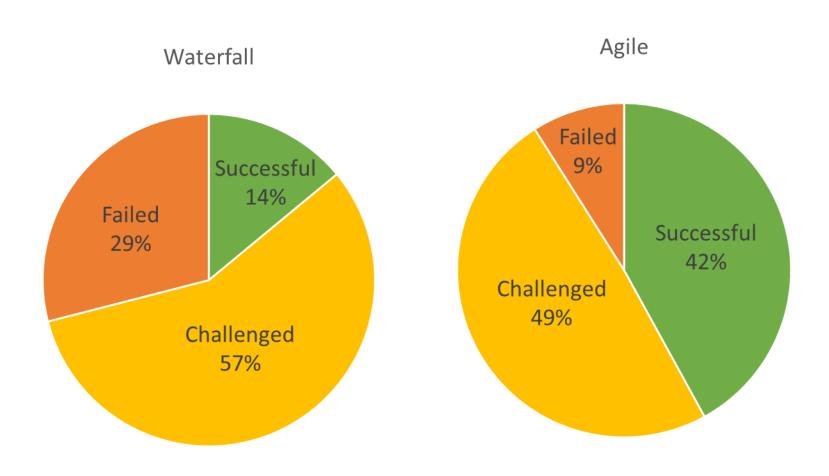

- 7. Working software as measure of progress
- 8. Sustainable development
- 9. Technical excellence
- 10. Simplicity
- 11. Self-organization
- 12. Continuous improvement

Agile Methodologies

- Scrum
- XP
- Kanban
- Lean
- And many more...

Is Agile More Successful?

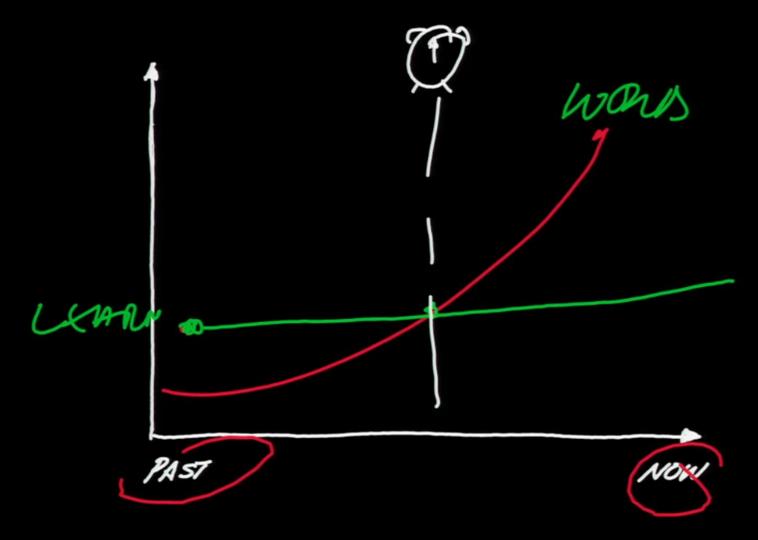

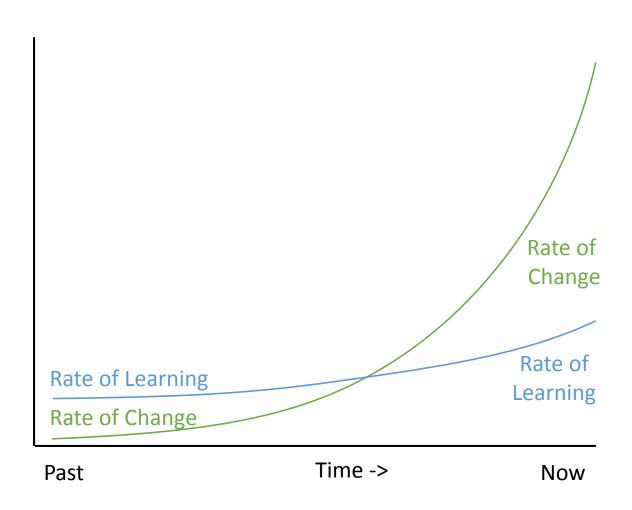

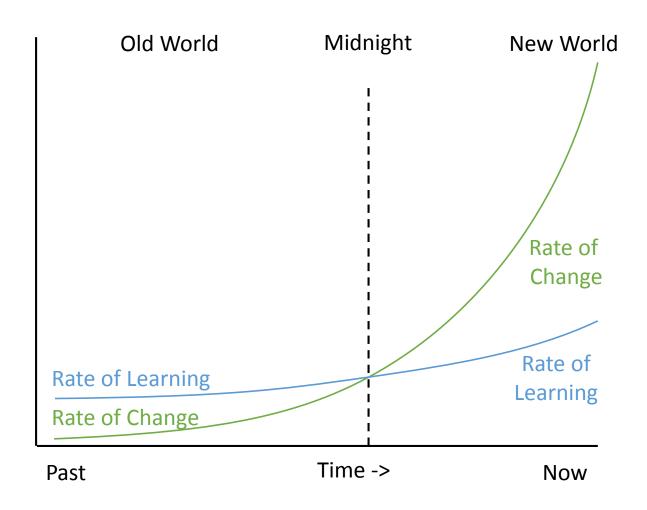

Source: www.ted.com

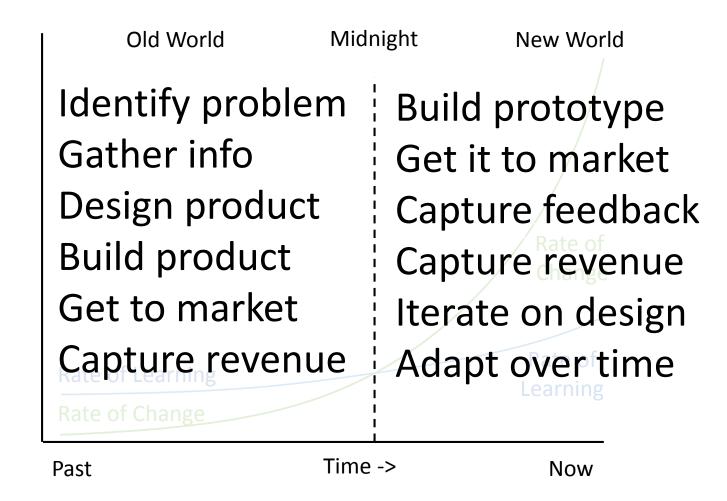

About fifteen years ago all the 'Rules' about how to run a business, organization, or government successfully, were changed or deleted and a completely new set of 'Rules' has been in operation ever since, which means that we keep acting rationally in response to a world we recognize and understand... but which no longer exists!

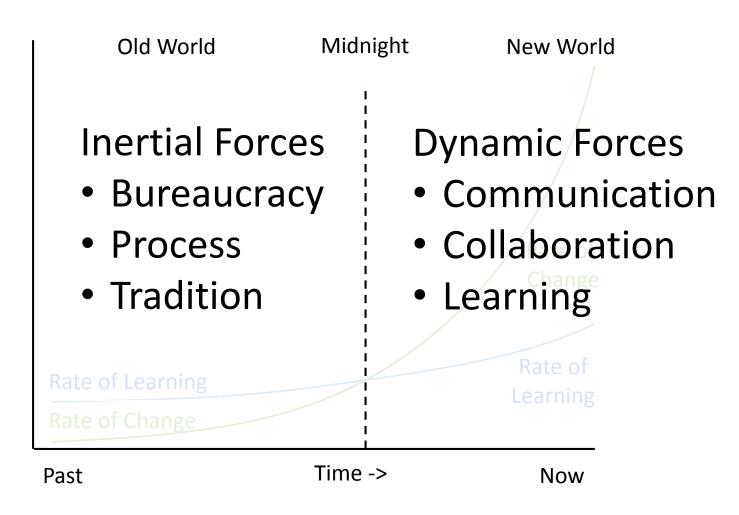

- Eddie Obeng

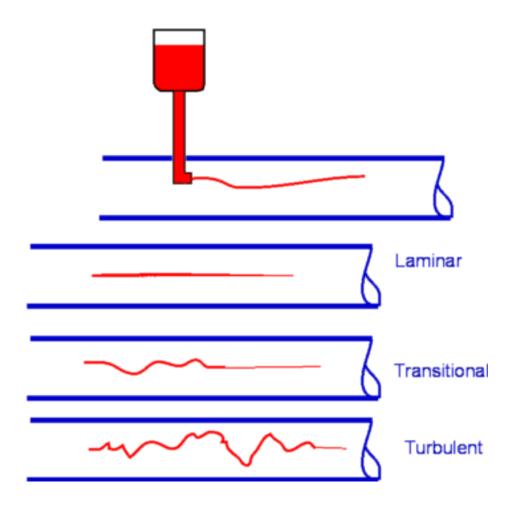

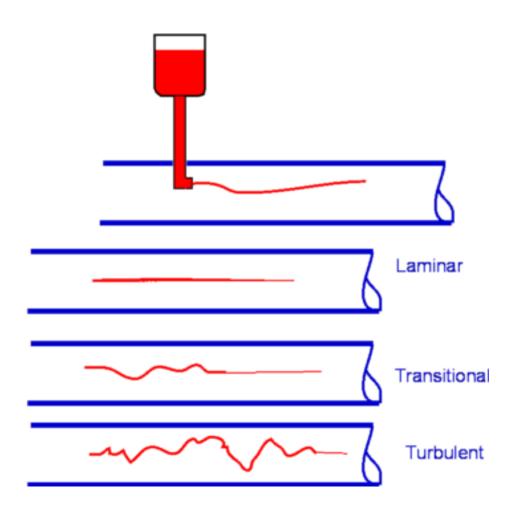

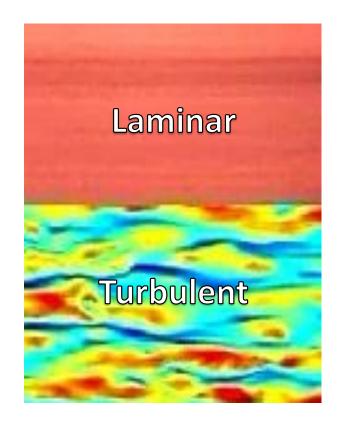

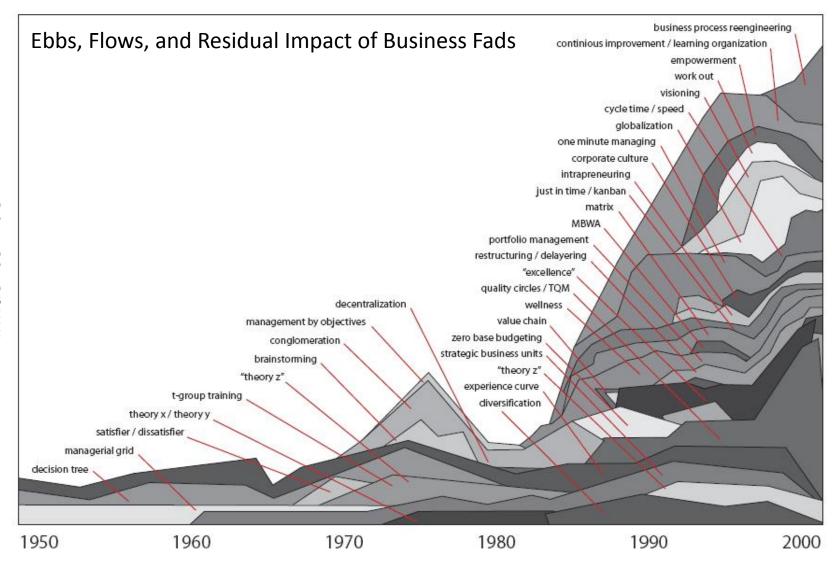

Laminar Flow vs. Turbulent Flow

Laminar Flow vs. Turbulent Flow

Why is this important?

Problem

- World has changed
- Markets change rapidly
- Requirements change rapidly
- High degree of uncertainty

Solution

- Adapt to new physics
- Faster time-to-market
- Better response to change
- Continuous and rapid feedback, validated learning, and smart failure

Agile is very well suited to operate in the physics of this new world!

2. Inverted Constraints

Four Levers of Software Development

Levers

- Scope
- Resources
- Schedule
- Quality
- Goals
 - Working software
 - Max value
 - Min cost

Source: http://farm6.staticflickr.com/5300/5521479079_36815225e4_z.jpg

Constraints

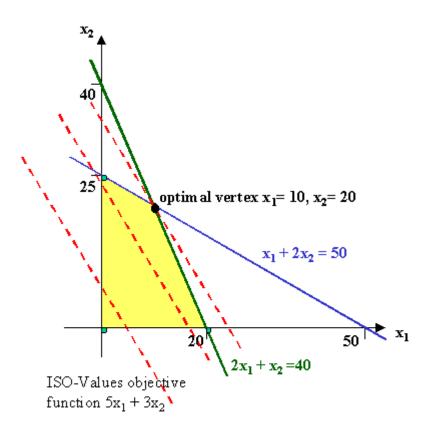

- Restriction on a degree of freedom
- Prevent the system from achieving its goal
- Examples
 - Time
 - Money
 - Talent

Source: http://www.myspaceantics.com/image-myspace-graphic/funny-pictures/outfielder-wall-collision.jpg.html

Constrained Optimization

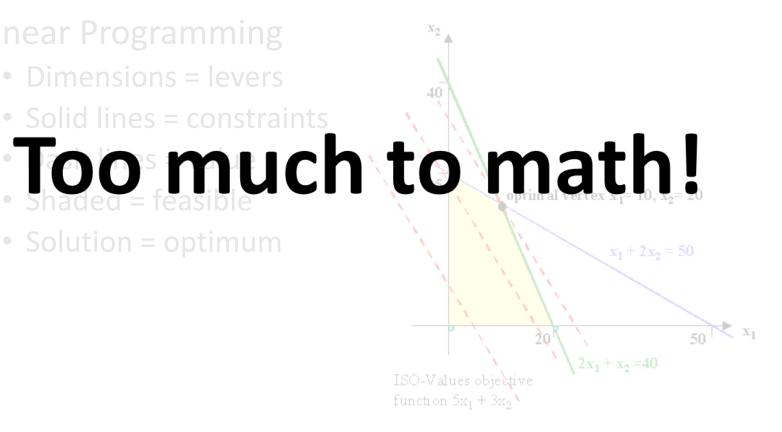

- Linear Programming
 - Dimensions = levers
 - Solid lines = constraints
 - Dash lines = value
 - Shaded = feasible
 - Solution = optimum

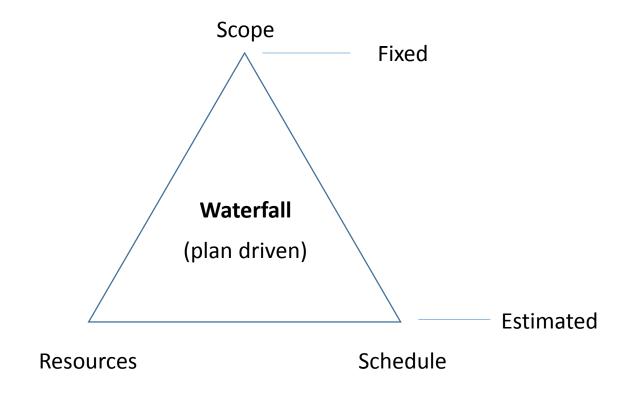

Constrained Optimization

- Linear Programming
 - Dimensions = levers
 - Solid lines = constraints

 - Solution = optimum

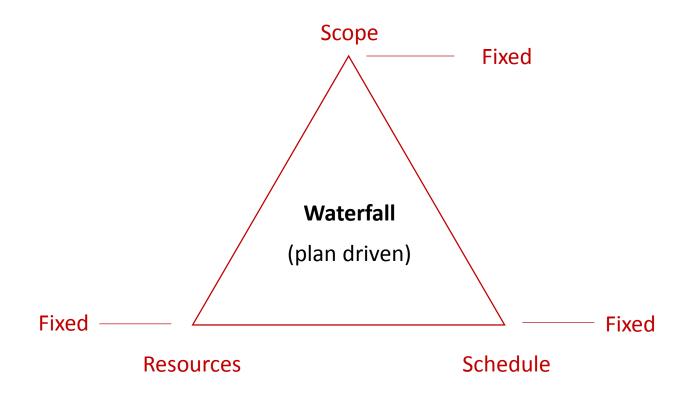

Waterfall Constraints

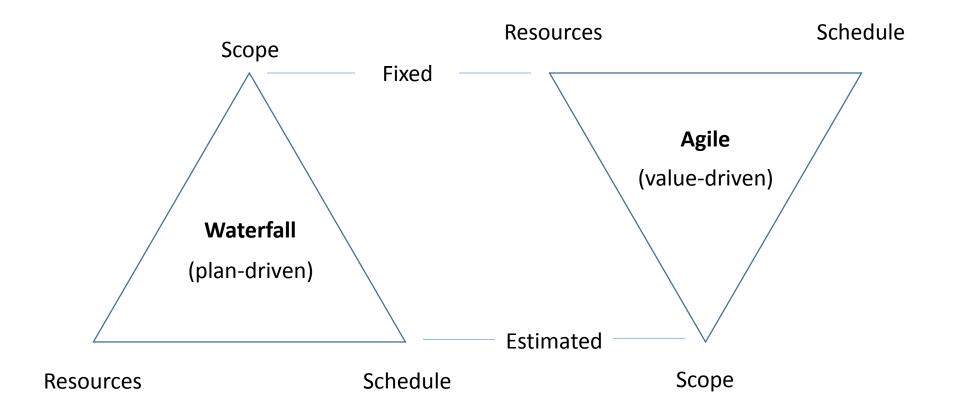

Waterfall Constraints

Waterfall Constraints

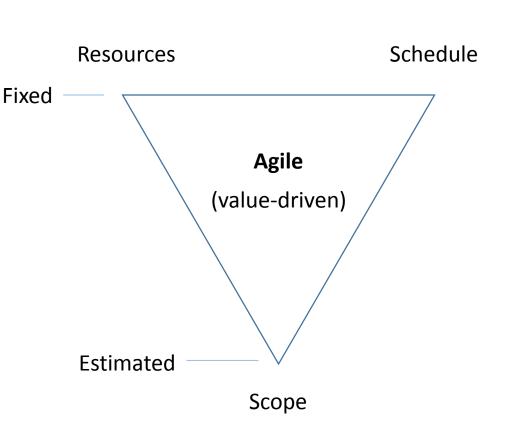

Agile Constraints

Agile Constraints

- Fixed team size
- Fixed releases
- Estimated features
- Team controls quality

Why is this important?

Problem

- Mythical man-month
- Slipping release dates
- Scope creep
- Technical debt

Solution

- Limit team size
- Fix schedule
- Estimate scope
- Protect quality

Agile is more flexible

3. Prioritizing Value

Quick Lesson in Economics

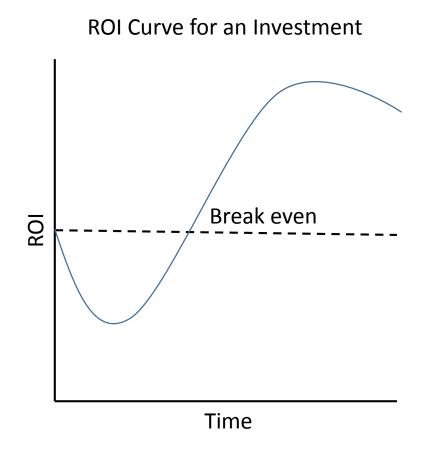

- 1. Return on Investment
- 2. Pareto Principle
- 3. Opportunity Cost

Source: http://myhomeworkhelp.com/economics-homework-help/

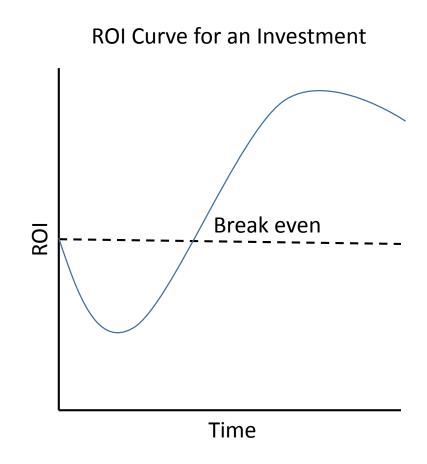

Return on Investment

- $ROI = \frac{Value Cost}{Cost}$
- High ROI => lots of value
- Low ROI => some value
- Neg. ROI => lost value

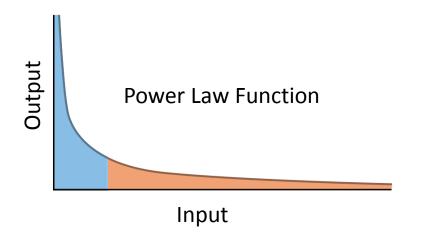

Return on Investment

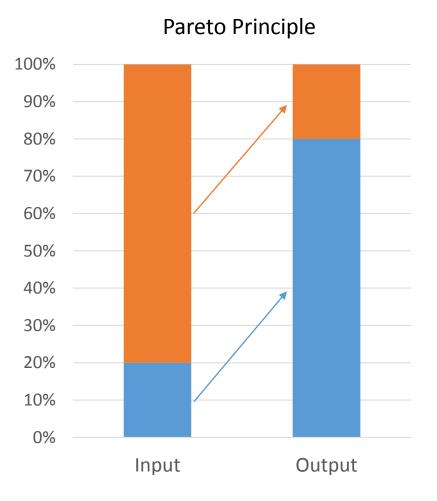

- Each feature has ROI
 - Cost to develop
 - Value to business
- Project ROI is sum of all feature ROIs
- Goal is to maximize ROI of the project

Pareto Principle

- 80/20 rule
- 80% of effects
- 20% of causes
- Power law function
- Diminishing marginal returns

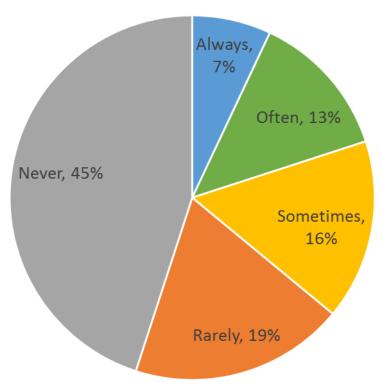

Pareto Principle of Software Feature Usage

- Features:
 - 20% of features
 - 80% of value
- Traditional software is:
 - 20% high-value features
 - 80% low-value features

Source: Standish Group

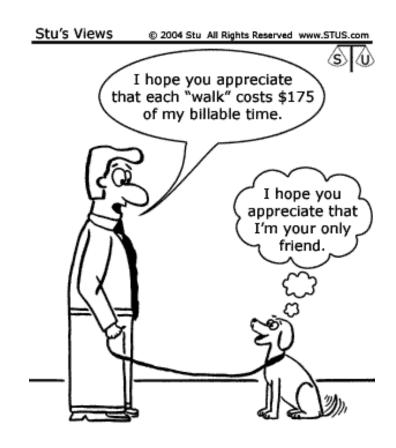

Opportunity Cost

Source: http://www.ethicurean.com/2009/03/03/free-lunch-program-in-new-england/

Opportunity Cost

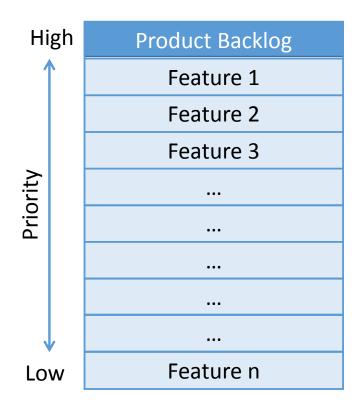

- Cost of foregone alternative options
- True cost = explicit cost+ implicit cost
- Must be included in cost-benefit analysis

Source: http://www.stus.com/

Prioritizing Features by Business Value

- Product backlog
- List of features
- Ordered by business value
- Highest priority on top
- Create and deliver features in order

Why is this important?

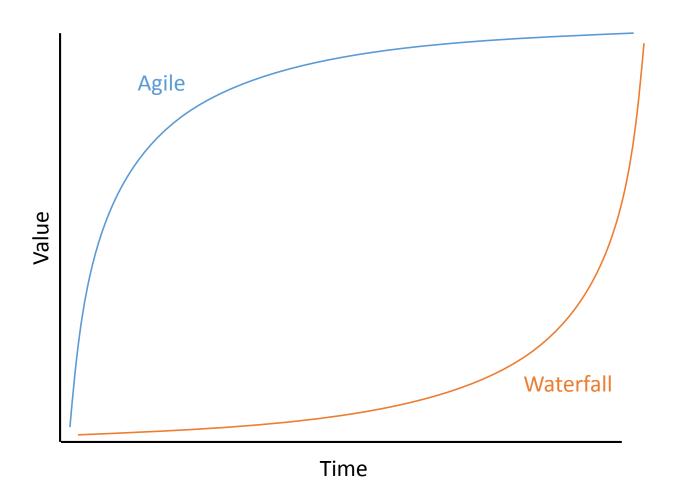

Problem

- Need to maximize ROI
- Need to reduce lowvalue features (80/20)
- Need to consider opportunity cost

Solution

- Prioritize features according to ROI
- Deliver highest-value features first
- Prioritize features relative to one another

Agile Produces More Value

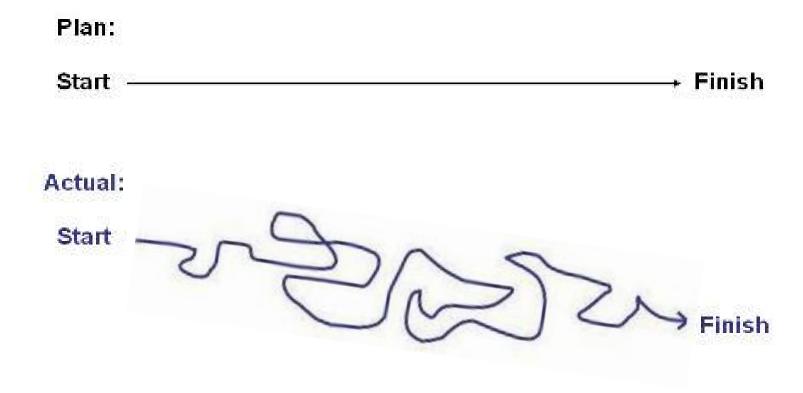

4. Embracing Change

Waterfall Assumes that Things Will Go According to a Plan

Plan:
Start → Finish

Waterfall assumes that everything will go according to plan

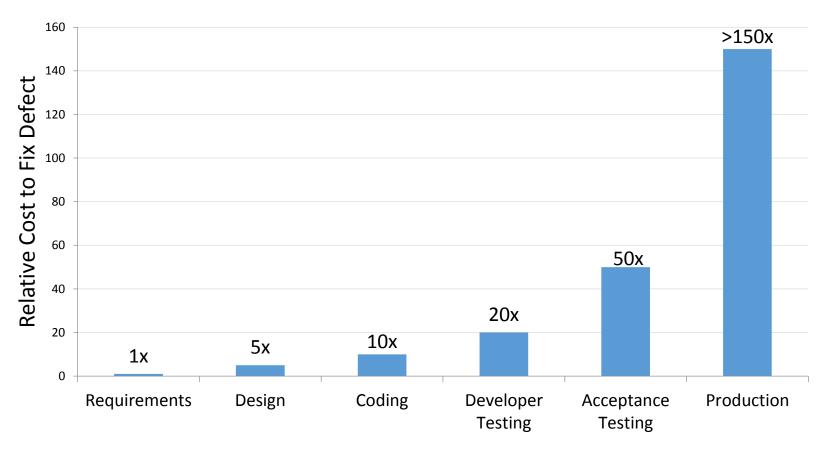

Waterfall

- Waterfall assumes:
 - Users actually know what they want
 - Markets will not change during development
 - There is nothing new or unknown
 - Technology is stable and mature
 - All of the pieces will fit together in the end

Waterfall

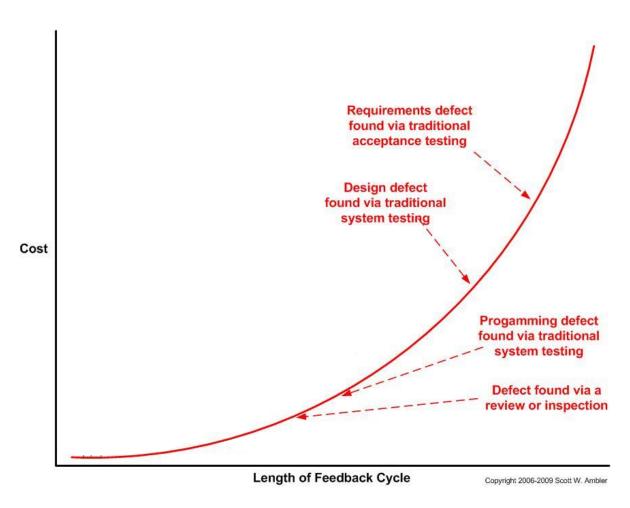

- Reality for most projects is:
 - Requirements are not stable
 - Requirements are just assumptions

Cost of Fixing Defects in Waterfall

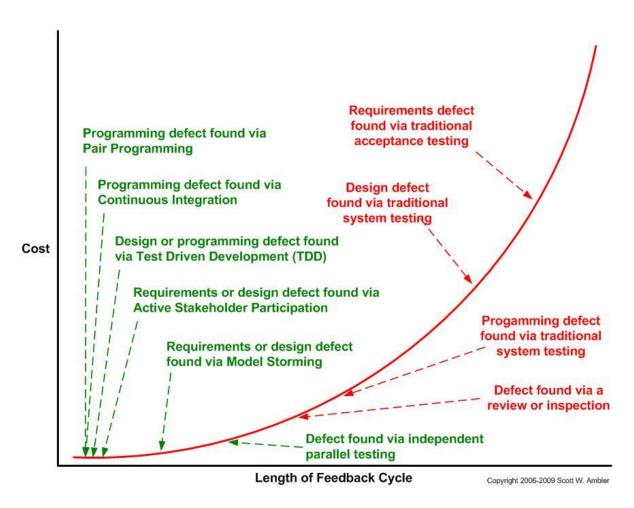

Software Development Phase

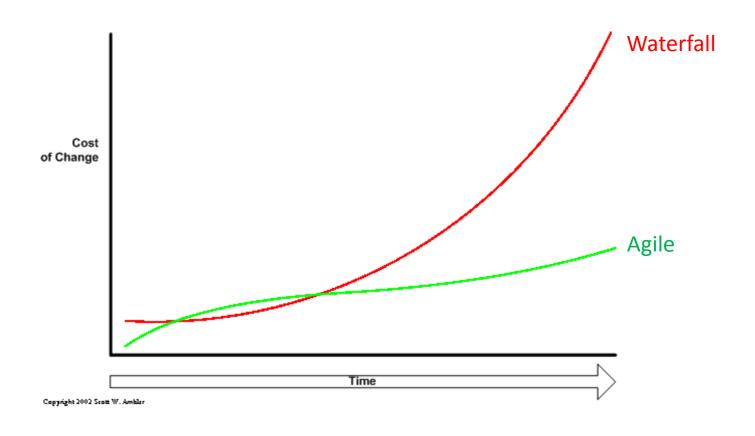

Finding Defects in Waterfall

Finding Defects in Agile

Cost of Change in Agile

Source: http://www.agilemodeling.com/essays/costOfChange.htm

Why is this important?

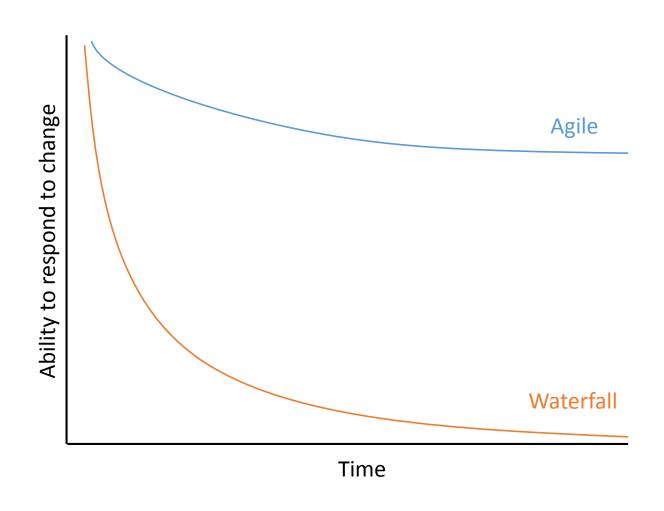

Problem

- Requirements change
- Finding and fixing defects late is costly
- Late changes in software are costly

Solution

- Embrace change
- Find and fix defects early
- Build flexibility into your code and process

Agile is More Adaptable

5. Self-Organization

How do you determine the price to charge for a loaf of bread?

Market Economy

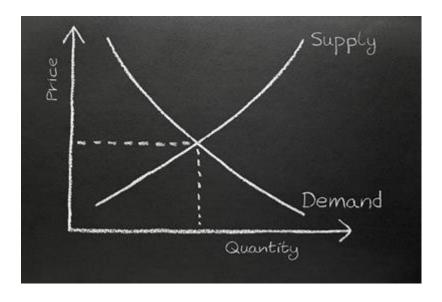

- Market makes decisions
 - Individuals
 - Interactions
- Produces & Consumers
 - Supply
 - Demand
- Millions of decisions

Source: Britannica

Market Economy

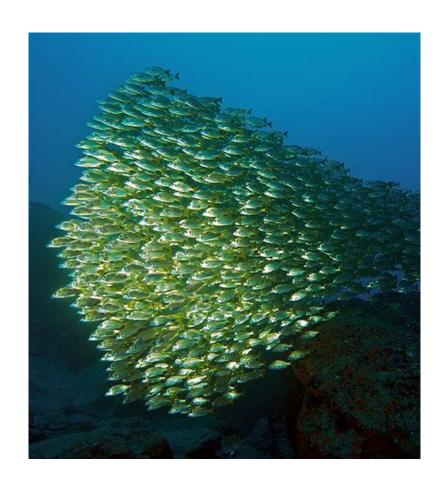

- Goal: Maximize Social Welfare
- Competitive Market Equilibrium
- Extremely efficient
- "Chaotic success"

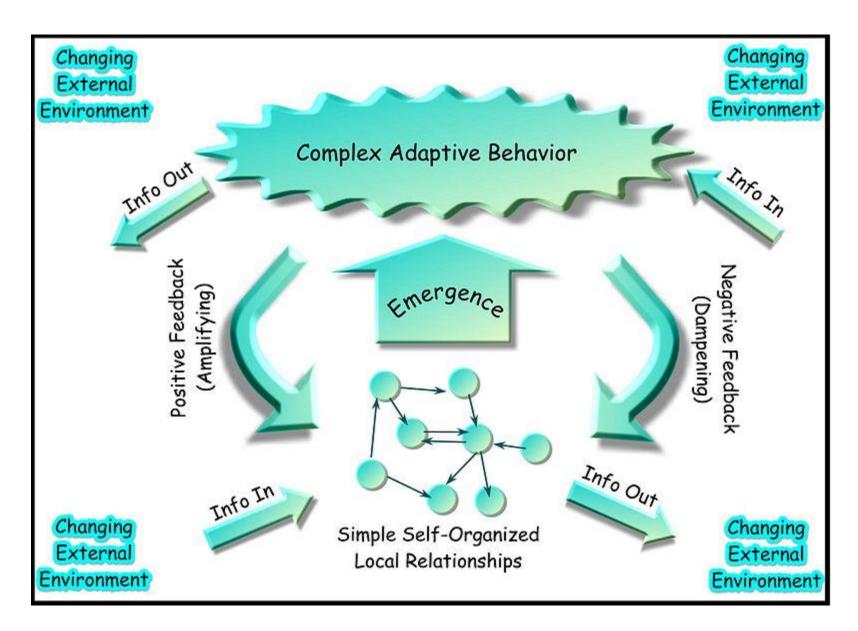

Source: https://content.dodea.edu/ VS/HS/DVHS_Courses/Economics/syllabus.html

Complex Adaptive Systems

- System
 - collection of interconnected things
- Complex
 - dynamic network of interactions
- Adaptive
 - changes in response to environment
 - to increase survivability

Source: Wikipedia

Inversion of Control

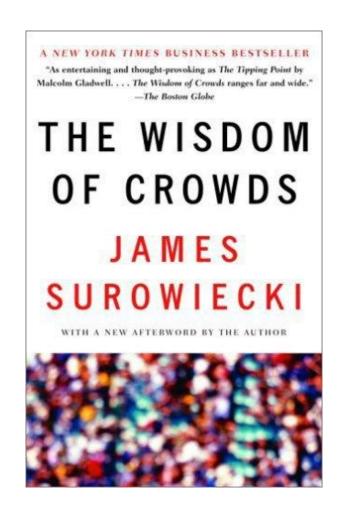

- Top-down
- Command and Control
- Bureaucracy vs.
- Bottom-up
- Self-organization
- Adhocracy

Source: http://funnyasduck.net/post/10458

Wisdom of the Crowd

- Take collective guesses of the crowd
- Aggregated answer is better than expert in many cases
- Works well for:
 - Quantity estimation
 - General knowledge
 - Spatial reasoning
- Not all crowds are wise!

Why is this important?

Problem

- Command and control is slow and inefficient
- Poor information flow in top-down structures
- Ineffective decisions

Solution

- Self-organizing teams
- Invert control structure to bottom-up
- Wisdom of the Crowds

Self-organizing Agile teams are more efficient

6. Efficient Communication

Cost of Poor Communication

- Cost is enormous
- Hard to quantify
- Hidden cost
- Expense is real

Source: http://www.cathy.willman.com/2012/06/what-boys-need.html

Cost of Poor Communication

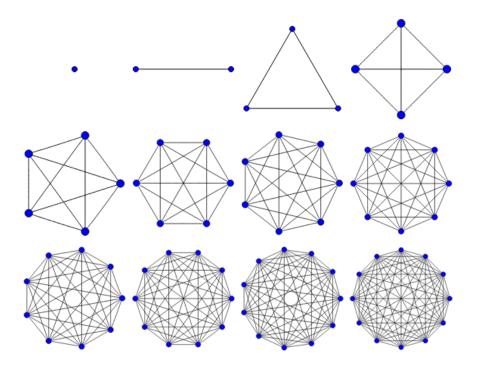

- 17.5 hrs / person / week
- Top 5 issues identified:
 - 1. Waiting for information
 - Unwanted communication (noise)
 - Inefficient coordination among team members
 - 4. Barriers to collaboration
 - 5. Customer complaints

Total estimated annual cost of poor communication per enterprise knowledge worker: \$50,562

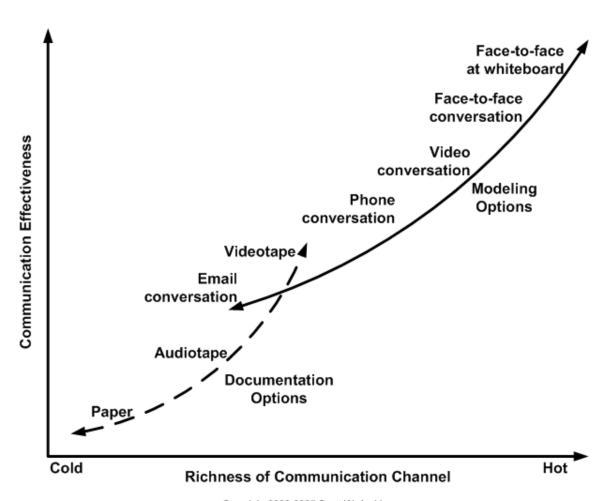

Communication Structures - Complete Graph

- Communication network modeled as a complete graph
 - Nodes = people
 - Edges = channels
- Edges increase by O(n²) in the number of nodes
- Becomes extremely inefficient very fast

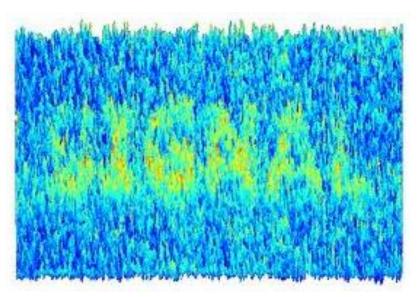

Source: Wikipedia

Effectiveness of Communication

Signal-to-Noise Ratio

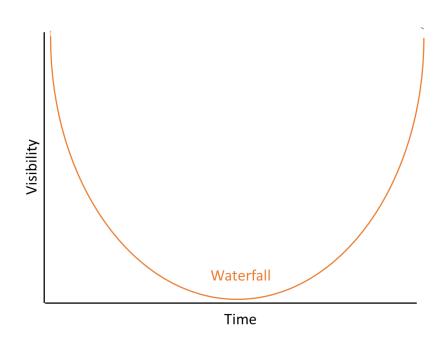

- SNR = P(signal) / P(noise)
- Signal = message
- Noise = everything else
- Goal is to maximize signal-to-noise ratio

Source: http://uber.la/2012/05/signal-to-noise/

Visibility

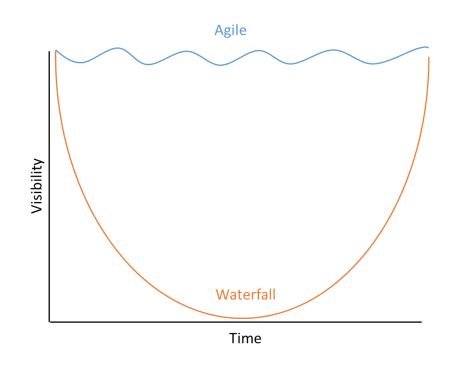

- Waterfall tends to hide many problems
- High visibility in the beginning
- Low visibility in the middle
- High visibility in the end

Original source: http://www.versionone.com/ Agile101/Agile-Software-Development-Benefits/

Visibility

- Agile provides visibility:
 - Information radiators
 - Regular inspection and adaptation
 - Frequent delivery of working software
- Agile is on the surface with project visibility
- Problems have no where to hide

Original source: http://www.versionone.com/ Agile101/Agile-Software-Development-Benefits/

Why is this important?

Problem

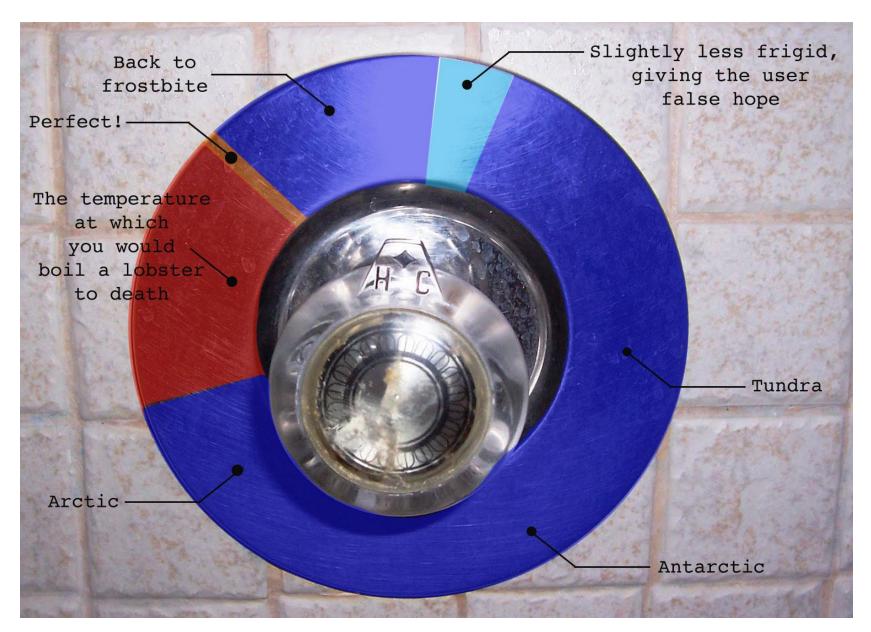

- Communication overload in large teams
- High cost of poor communication
- Lack of transparency

Solution

- Small teams
- Maximize signal-tonoise ratio
- Increase visibility

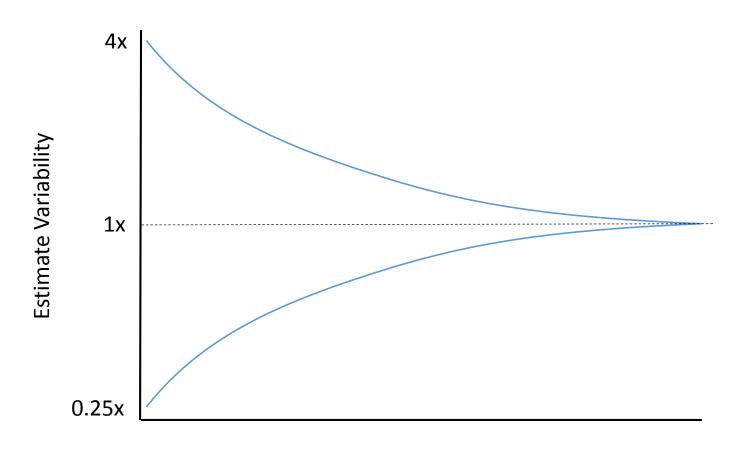

Agile teams communicate more effectively

7. Feedback

Source: http://www.letterstobuffoons.com/wp-content/uploads/2012/09/ShowerHandle.jpg

Cone of Uncertainty

Time

Original Source: Barry Boehm, Software Engineering Economics (1981)

Feedback and Learning

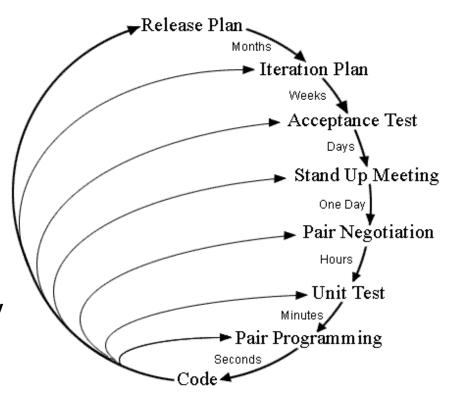

- We reduce uncertainty by learning
- Feedback is necessary for learning
- Continuous and rapid feedback allows us to learn more effectively

Source: http://www.icanhascheezburger.com

Agile Feedback

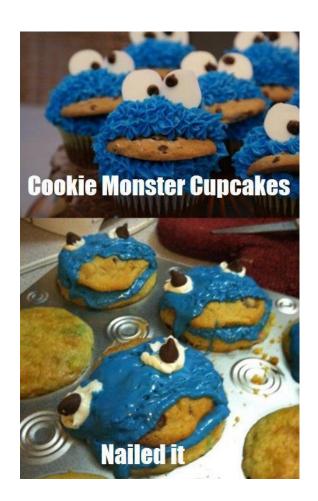

- Continuous and rapid feedback
- Multiple timescales
- Powerful for:
 - Learning
 - Reducing risk
 - Eliminating Uncertainty

Source: http://www.agile-process.org/communicate.html

Smart Failure

- Short and frequent experiments
 - Lots of small failures
 - Lots of small successes
- Low cost and high value
- Old world vs. new world
- Requires mindset change
 - It's ok to fail small
 - It's ok to fail smart
 - However...

It's Not OK to Fail BIG!

Source: http://t4toby.files.wordpress.com/2008/07/epicfail1.jpg/

Know When to Pivot

- Pivot = change direction
- When our assumptions are incorrect we pivot
- Pivot early, not late
- Minimize cost to pivot

Source: http://thesalespivot.com/wp-content/uploads/2011/07/left-turn-sign.jpg

Why is this important?

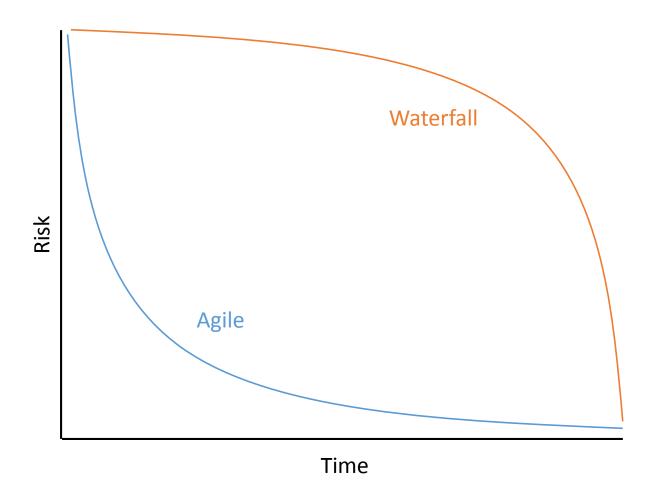

Problem

- Cone of Uncertainty
- Epic Failure
- Difficulty changing course once invested

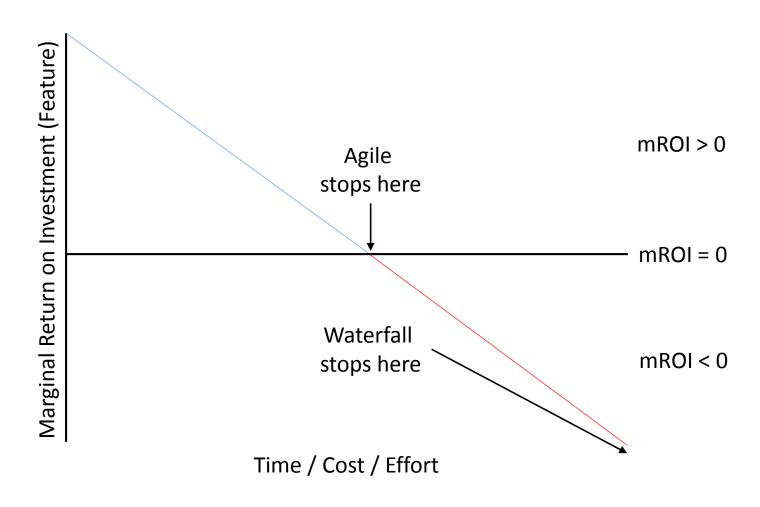

Solution

- Feedback
- Embrace Smart Failure
- Minimize cost to learn and then pivot often

Agile Teams Use Feedback to Reduce Risk

Know When to Stop

Know When to Stop

Everything else:

- The Cost of Complexity
- Eliminating Waste
- Inventory Hides Problems
- Metrics Have Consequences
- Embracing Human Factors
- Information Gain / Entropy
- Embedded Documentation
- Kanban and Queuing Theory
- TDD, Dopamine, and Crack
- Sustainable Development
- Agile is an Emergent Property
- and much more...

Source: http://www.rounds.com/blog/wp-content/uploads/2010/11/stop-hammertime.png

Conclusion

Why is Agile So Successful?

- 1. It is well adapted to the world after midnight.
- 2. It inverts its constraints to be more flexible.
- 3. It maximizes ROI by prioritizes features by value.
- 4. It is more adaptable by embracing change
- 5. It utilizes the efficiencies of self-organization.
- It produces more effective communication.
- 7. It reduces risk by continuous and rapid feedback.

Questions?

Feedback

- What was one thing you thought was valuable?
- What is one thing you would change?
